- The computer is a marvel of electronic skill. It was originally a calculation machine but is now functioning various jobs. It is a mechanical Dr. electronic apparatus capable of carrying out highly complex mathematical operations at a very high speed. We have begun to feel that we are moving into the computer age because it is being used in various fields of human activity. It works mechanically. It has no capacity of independent thinking like the human brain. It can work after the programmer has fed it with the required data. If it is properly fed, it can do many jobs of number of men in a twinkling of an eye. It is believed that the future school will run with the help of computers and without the real teachers. They will not only teach the students but they will give tests and will mark the exercises at a great speed.
- OR
- Q-6. Prepare a C.V. for the post of computer operator.
